

# Data Centre Design and Build

Indigo offer a complete design and build service for your Data Centre cabling and suite fit-out requirements.

## Why Indigo?

Through years of experience working in critical Data Centre environments, we understand that the quality of the suite layout and structured cabling design and installation plays a major role in the performance of your network infrastructure.

### Structured Cabling

A structured cabling system provides the critical foundation for your business operations and by employing Indigo to design and install a standards-based system, you can reduce maintenance time, minimise downtime and save your company money.

We are experienced, trained and certified in a wide variety of fibre and copper cabling technologies. We have the tools and test equipment required to provide state of the art installations backed up with long-term manufacturers warranties.

Our other structured cabling related services include CAD design, equipment rack elevations, infrastructure audits, project management, testing and certification and system commissioning.

### Data Centre Suite Fit-outs

Indigo can take your whitespace in a Data Centre and transform it into a fully functional operating hub. We supply and install all of the physical infrastructure including racks, PDUS, cold/hot aisle containment, overhead and underfloor cabling containment/basket/tray, door entry systems, copper, fibre and power cabling, distribution frames and cagework.

### One Stop Shop

Once the whitespace has been transformed with physical infrastructure, Indigo add further value to your business by racking and stacking equipment, connecting all power leads and data cabling patch leads and by powering up and commissioning network, server and storage devices. We can also supply, ship and store equipment, cabling and a whole range of consumables which are used to guarantee a professional installation.

# Why work with us?

## Data Centre Specialists

At Indigo we understand the critical nature of the Data Centre environment. We have hundreds of technicians who are not only trained to the highest installation standards, but also understand the critical role that Data Centre infrastructure plays in our customers' business processes. You will find our technicians in all the major Data Centres in the world at all times of night and day, busily taking care of our customers' network infrastructure.

## Reliable and Experienced

Indigo are a reliable and highly experienced company who strive to exceed customer expectations to get the job done. Whether it's a single site installation or a complex installation involving hundreds of points across the globe, Indigo has the capabilities and the manpower to do an excellent job within your timeframe.

## Partners

Over the years we've built a steady network of global partners to deliver exceptional services from the very first port of call. Founded on good work ethic and trust, our collaboration ensures we safeguard and guarantee outstanding performance every time.

## ISO Accredited

As one of a small number of service companies accredited to ISO27001 Information Security Management, Indigo offers secure services such as disaster recovery and business continuity services including moves, adds and changes (MACs).

## We Provide

- ▶ Complete Design and Build solution for your Data Centre Suite Fit-out and Cabling Requirements
- ▶ Decades of Experience in Critical Data Centre Environments
- ▶ Certified Installers Covering the Most Popular Systems
- ▶ CAD Design Service
- ▶ Infrastructure Audits
- ▶ Full Project Management
- ▶ Testing, Certifications and Systems Commissioning
- ▶ Global Partner Network
